

Dear Impact,

I would just like to update you on my home which you know is in a part of the country where temperatures are extreme on both ends, cold/hot and humid. Well this is now my 3 rd winter in the new foam ponderosa. The last two winters I have had my heat on full blast, that's 8500 square feet of area heated and I have been using 885 gallons of oil in a 12 month period and that also includes my domestic hot water. Houses in the area which are roughly the size of mine are using 400% more. An 1800 sq. ft house across the street from ours uses over 1000 gallons and they keep their place real cool.

In the summer I put in a 12,000 btu window air conditioner and it conditions the entire house!!!! Not only is my home 50 times better than old Al Gores but the best part is I live on top of a mountain and the wind always blows, sometimes ferociously and the structure does not even creak. I just wanted to update you because as you well know I would not have been able to accomplish this feat without your technical expertise and hands on know how in this type of insulation. Your knowledge in selection of foam equipment and the proper chemical to use is second to none.

WOW were we ahead of the curve, look at energy prices now. Not only is my home the most comfortable home around for its size, but it is more energy efficient than homes 4 times smaller. Again thanks for all your help, my checkbook and I can't thank you enough.

Sincerely

Jim Foster
