

Dear Polymac/Gama USA,

From the time I bought my new Gusmer HV 20/35, and for 3 1/2 years I had pressure fluctuations and had to have someone constantly watching the hose pressure gauges while I sprayed to prevent crossover.

In colder temperatures my previous three OEM hoses would drop from 170 degrees to 130 spraying polyurea coating. Even in normal ambient conditions the temperatures were erratic.

No one in the industry could figure out what was wrong with my machine until I purchased a set of your hoses from Ralph Terzich at Impact Polyurethane Chemicals. From the day I installed your hoses, my pressures stopped fluctuating, and my hose temperature even in -20F weather stayed remarkably at a near consistent 170.

In all my years of spraying I have never seen a hose with this level of consistency and performance.

I will be purchasing equipment very soon for a new spray foam business, and it will be GAMA equipment.

Thank your Sincerely,

Jeremy at JBC Rods
